

Overview

Prenatal Screening Tools for Medical Care Providers

Susie Ball, MS

Experience and feedback from medical providers has led us to develop a number of tools that may be helpful:

1. The **“Prenatal Screening Brochures”** patient education pamphlet has been revised to be more simple and straightforward. These revised pamphlets are now available in English and Spanish.
2. A **“Prenatal Screening Decision Tree”** was developed to assist you with the process.
3. Experience and your feedback have also helped us identify items to consider in your discussion with your patient. See **“Prenatal Screening-Items to Consider in Discussion with Patient”**.
4. Financial concerns were cited as a possible barrier. **“Prenatal Screening 2010 Estimated Fees”** provides estimated fees and resources for help.
5. **“Patient Screening Testing Information”** is a suggested form for use in your office to assist the discussion, decision making, and tracking of results for prenatal screening.
6. To implement first trimester screening in your office, without sending patients through the genetics program, we have listed recommendations. See **“Recommendations for Implementing Prenatal Screening in Your Practice”**.
7. Transportation resources throughout Central Washington are available to patients with medical coupons through People for People at 1-800-213-1624. Patients residing in Klickitat County may contact Mt. Adams Transportation at 1-800-447-7858.
